

The old clamp. Functional, but easy to open using conventional tools.

The new High Security clamp. Patent pending.

It is essential that someone of the construction company is responsible for the key and notes where this is stored.

Heras Mobile Fencing & Security introduces

The High Security clamp

The High Security clamp from Heras Mobile Fencing & Security is a new product aimed at significantly improving on-site security in the construction industry. The High Security clamp enables site fences to be securely fastened (and dismantled), only with the use of a special key.

One of the biggest security headaches in the construction industry is the open fence. It's a well known fact that builders and contractors like easy access to their place of work. When they leave in the evening, they leave the fence open in the knowledge that they can take a short cut onto the site the next morning.

Then there are always those nosy people, maybe potential buyers, inquisitive to know what's going on first hand. What's worse are those intruders with malicious intent, hell-bent on causing vandalism or on the prowl for easy pickings.

Locking up after a day's work is therefore a must. That's why Heras has developed the High Security clamp, part of its integrated on-site security concept. Effective and easy-to-use, the High Security clamp is a major new innovation.

By simply tightening the clamp (with a rattle) your site fences are secure, once and for all, thus eliminating the need for time-consuming checks for gaps and short-cuts along the site perimeter at the end of the day.

Benefits of the High Security clamp

Using conventional tools, the High Security clamp is impossible to open. With the foreman in charge of the key, it is no longer necessary to carry out a full site check every day. For maximum deterrence, use of the High Security clamp can be combined with M200 Anti Climb fencing. In the unlikely event of an accident or theft, you will at least be able to show that nothing has been left to chance and that the site is well nigh impregnable.

*Heras M200 Anti Climb.
Affordable. Finer mesh provides
increased security.*

*The anti-lift device prevents fences
being lifted out of the block.*

*Recycled block: unique quality in
terms of convenience and stability.*

The ideal security concept for the construction industry

On-site security has long since been high on the agenda in the construction world. Independent research has shown that the industry loses hundreds of millions in needless damage each year due to slack security. These costs continue to spiral year on year as a result of theft, vandalism and accidents to children. So it's no wonder when an innovative new product comes along to tackle the issue of temporary security, you're interested. Heras once again has come up with the answer for you and your insurers. The ideal security concept for the construction industry consists of:

- The brand new M200 Anti Climb fence;
- The revolutionary High Security clamp;
- An ingenious anti-lift device;
- The recycled block for temporary fencing.
